

# PROCESS CARDS

## ICT to GENERATE IDEAS

PRAGMATA

Insightful Consulting

The whole production information's system effectiveness is related to the capacity of **managing big amounts of records, finding the right information at the right time and let it contribute to generate new knowledge.** Every department must have the right access to informations.

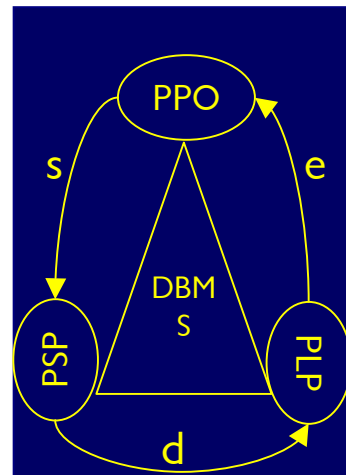

Within the product development process the success-key is to implement an effective knowledge management system, embracing every value add activity.

So, the information and document flow design, together with the right software tools selection and implementation, undoubtedly become a part of your enterprise strategy.

What stands behind PROCESS CARDS is the awareness that manufacturing data thoroughness, coherence and update are crucial to process-industry.

This application's goal is helping you translate product-into-process knowledge, and making informations easily available to any authorized person that may need them. The way he wants to see them.

While conducting a BPR project, it's fundamental to investigate inter - department informational flows, identifying the key relationships and giving them the right relevance in a global vision.

**s:** Customer Specific Limits

**d:** Manufacturing Requirements

**e:** Previous Experience
